

Enable GPEDIT.MSC on Windows 11/10 Home Editions

```
Administrator: Command Prompt
Microsoft Windows [Version 10.0.22000.376]
(c) Microsoft Corporation. All rights reserved.

C:\Users\ACK>FOR %F IN ("%SystemRoot%\servicing\Packages\Microsoft-Windows-GroupPolicy-ClientTools-Package~*.mum") DO ( DISM /Online /NoRestart /Add-Package:"%F" )|

C:\Users\ACK>FOR %F IN ("%SystemRoot%\servicing\Packages\Microsoft-Windows-GroupPolicy-ClientExtensions-Package~*.mum") DO ( DISM /Online /NoRestart /Add-Package:"%F" )|
```

Microsoft also offers an undocumented way to enable GPEDIT in Windows Home editions as follows.

Sign in as an administrator, stay connected to the internet and execute the following command one after the other in an elevated command prompt windows:

```
FOR %F IN ("%SystemRoot%\servicing\Packages\Microsoft-Windows-GroupPolicy
```

```
FOR %F IN ("%SystemRoot%\servicing\Packages\Microsoft-Windows-GroupPolicy
```

Once done restart your computer and see.

On the restart, you will be able to open the Group Policy Editor, but some administrative templates may be missing. You can manually download and install [ADMX files](#); however, do remember that not all features are available on the Home edition. Multiple Local Group Policies (MLGPOs) are also not supported on Windows Home. You should also note that Windows Home users will have to necessarily restart their computer to apply new settings.
